Top new ringtones 2021 free for android

Smartphone ringtones aren't typically something you think about, until you feel yours and want to change it to something more fun and original. While the preset ringtones available on iPhone are functional, it's easy to get bored listening to them over and over again for years on your phone and those of your friends and family. It's good to know that there are more ringtone options than Apple's diverse but limited selection. If you're looking for a new way to customize your iPhone, try creating your own original ringtones. There are no limits to the songs and sounds you can use to create an eye-catching ringtone. Create a ringtone using Apple iTunes or Music Step 1: Open and update Apple iTunes or Music Start by starting iTunes (MacOS 14 High Sierra or earlier) or Music (MacOS 15 Catalina or latest version) on your Mac or Windows desktop or laptop computer. Be sure to use the latest version of iTunes or Apple Music. To store MacOS High Sierra or earlier, click iTunes on the application toolbar and select Check for updates from the resulting drop-down menu. If you're using the latest version of Windows 10, click the Help option in the menu bar below the play buttons and select Check for updates at the bottom of the resulting drop-down list. If you're running MacOS Catalina or newer version, launch the App Store app and choose Updates on the App Store toolbar. Use the Refresh button to download and install the latest version if necessary. Depending on the age of the music, you may need to remove Digital Rights Management (DRM) protection from the track before using it as a ringtone. Also, make sure your chosen melody is downloaded to your Mac. A download icon next to the song means that it resides in the cloud, so if it is, click to download it to your hard drive. Step 2: Choose a song Here's the fun part: choose the song you'd like to use as your new iPhone ringtone. Keep in mind that iPhone ringtones are played continuously in loops of 30 seconds (or less), so don't choose something stupid or embarrassing. Once you're chosen your song, take note of the start and stop times for the 30-second piece you want to use. Step 3: Add start and stop times One of the lesser-known features of iTunes and Music is the ability to crop songs and videos, allowing you to choose specific start and end times. Here's how to select a part of a song to use as a ringtone. First, right-click or ctrl the song you want, and select Song Information (Get Information in MacOS Catalina or Later) from the resulting drop-down list. then click the options tab at the top Window. There should be camps for Start and Stop. Enter the times you want. Remember that ringtones maximize to 30 seconds, so keep it at that length or below that length. Once you've done that, click OK at the bottom. The interface of iTunes and Music differs slightly, but the process on both is the same. Step 4: Create an AAC version Apple's preferred audio format is AAC because it provides audio quality similar to a But it takes up less storage space. Both iTunes and Music allow you to create an AAC version of whatever song you choose. After you set the start and stop times and select the song, go to File > Convert > Convert to AAC version or To Music Create AAC version. Because the start and stop times of the song have been set, creating an AAC version will create a copy of that specific section of the song. The copy will then automatically appear in the iTunes library, directly below the original song, cropped to the chosen 30 seconds. Before you do anything else, go back to the Info page of the original song and reset the start and stop times to their original settings. Step 5: Copy the file and delete the previous one After you create it, click the AAC version of the story and drag it to the desktop or save location that you want. This will copy the file to that location. You probably don't need the abbreviated song in iTunes anymore, so feel free to delete the file. Right-click or press CTRL to click the AAC file in iTunes, and then click Delete from Library from the resulting drop-down menu. Then, click the Delete Files button in MacOS High Sierra or earlier, or choose Keep Files or Move to Recycle Bin in MacOS Catalina. Change the extension and set the ringtone Step 6: Change the extension AAC files typically use the ..m4a extension, which you can notice when you click the AAC file. For ringtones, however, iTunes uses the .m4r extension, which is essentially the same .m4a with a different name. This means that you will need to change the extension from .m4a to .m4r to use the clip as a ringtone. Go to your desktop or, wherever you saved it, click the file name and change the extension from .m4a to m4r. Click the Use .m4r or Yes button in the resulting warning window to confirm the changes. Show file extensions in Windows If you're using Windows, you might find that you can't change the file extension, at least by default. This is probably because the system is set to hide file extensions. To change this situation, open Control Panel from the Start menu —that is, you can also search for the Control Panel app in Windows 10, and select Appearance and Customization. Then click File Explorer Options. Click the View tab, clear the box next to Hide Extensions for Known File Types, and click the Apply button at the bottom of the window. Now you should be able to see and change the file extension. Step 7: Add files to your iPhone To add the m4r ringtone file to your iPhone, connect the device to your computer using a lightning-to-USB cable. Then, select the iPhone icon in the corner high to the left. Go to the Summary section and scroll down to Options. Select the box next to Manually manage music and video, and then click Apply. Now, drag the m4r file to the Toni tab that is located in On My Device, which will automatically sync the ringtone with your iPhone. If you have problems dragging the m4r file on the Tones tab after applying the changes, disconnect the iPhone and and Itunes. Then, connect your iPhone and try dragging the file back into the window. If you're using MacOS Catalina (or newer version) and you don't have iTunes, open the Finder and click your iPhone in the sidebar. If this is the first time you have done this since the update, you may need to click the Trust button and go through the process to open your iPhone on your Mac. From there, the steps are similar. Select the General tab, select the box next to Manually manage music and video, and then click Apply. There is no Toni tab, so drag the ringtone file to your iPhone name above the General tab. This will synchronize your new ringtone with your phone. Step 8: Set the ringtone for iOS 13, go to Settings > Sounds & Haptics > Ringtone, and select the ringtone from the top of the resulting list. For iOS 14, go to Settings > Sounds > Ringtone. Keep in mind that you can always set the new ringtone as text, voicemail, or email tone in addition to the sound of notification for Facebook posts and tweets. A tone is a tone as far as Apple is concerned, so you can use it as the default sound for any notification or alert. How to create a ringtone using GarageBand You might prefer to create your own ringtone in Apple's GarageBand app by cutting a part of a song you like or creating your own. You can create a ringtone on your Mac using GarageBand and share it with your iCloud Drive so you can open it in GarageBand on your iPhone. To share songs from your Mac to GarageBand for iOS, you need to enable iCloud Drive, then start by setting up iCloud Drive on your Mac and iPhone. Once it is on your iPhone, export the song as a ringtone from GarageBand or simply create the ringtone directly on your iPhone. Use GarageBand for iOS This is easier if you already have the GarageBand iOS app and music track that you want to use on your iPhone. Launch the GarageBand app and find the song you want to use. Keep in mind that if you haven't already reduced it to 30 seconds, GarageBand can do it automatically, even if it may not be the 30 seconds you mean. Tap and hold the song, and then choose Share > Ringtone. Name the ringtone and tap Export. Tap Use Sound As and choose Standard Ringtone, Standard Text Tone, or Assign to Contact. From a track on your Mac Here's a method you can use with an existing melody running MacOS Big Sur and GarageBand 10.3.5, both newer versions available. Open GarageBand on your Mac, click Blank Project, and then click Choose. Select the Audio Microphone icon and click Create. Click View > Show Media Browser to reveal resident songs. Choose a melody you want and drag the selection from the media browser to the workspace. Move the cursor to the lower left or right corner track and you'll see an icon that you can use to click and drag to shorten or stretch the track at the specific part that you want to use for the ringtone. when you are finished choosing a sound for up to 30 seconds right-click and then click split playhead and then right-click and then click to remove the rest of the melody so that only the 30-second interval remains. Click Share. From this menu, you can export the song to iTunes or Music on your desktop or as GarageBand for iOS files. If you choose the first one, follow step 7 from the section of the previous computer. If you have an iPhone with GarageBand on it, you can import GarageBand for the iOS file and then set it as the ringtone for the previous section. Create a track using GarageBand loops You can also build your own song from the loops available in GarageBand. Here's how. Create a blank project, and then click Choose, click the microphone button, and then click Create. In the upper-right corner, click the Loop icon in the middle (looks like a loop). You can now browse the available loops, dragging them to the track field in blocks. Arrange them however you want, keeping the same loop played over and over again or adding more loops on separate tracks to create more complex songs. When you're done, click Share, and then click Song in Music. You can then export the song as an m4a file, and at this point you can change the extension to m4r and copy it to your iPhone. Or share Project on GarageBand for iOS and add it as a ringtone from iCloud. Editors' recommendations Councils
